TITANIUM NIOBIUM (TI-NB) THREADLESS PINS

Titanium Niobium (Ti-6Al-7Nb) ASTM F1295 is a Titanium alloy containing 6% Aluminium and 7% Niobium. In comparison to Ti-6Al-4V the replacement of Vanadium to Niobium results in even higher corrosion resistance and excellent biocompatibility. Titanium Niobium has its main use in the medical and dental industry to make implants. The alloy shows high compatibility to ingrowth to the human body. Therefore, the application for Piercing Jewelry is a great match.

PLATINUM (PT950)

Platinum is a naturally occurring precious metal known for its exquisite beauty, durability, and versatility. Platinum belongs to the platinum group of metals, which also includes palladium, rhodium, ruthenium, iridium, and osmium. In its purest form, platinum is 95% pure, commonly referred to as "PT950" (meaning 950 parts per thousand are platinum). This high level of purity ensures its exceptional quality and value.

With its unmatched Brilliance and Luster, Platinum possesses a unique, white-silver appearance that distinguishes it from other metals. Platinum's reflective properties result in a striking, mirror-like luster, capturing and enhancing the brilliance of gemstones and diamonds and unlike White Gold it doesn't require plating.

One of platinum's standout features is its exceptional durability. It is highly resistant to corrosion, tarnish, and wear, making it an ideal choice for body jewelry. Unlike other metals, platinum retains its luster and does not fade or change color over time.

Platinum is hypoallergenic, making it an excellent choice for individuals with sensitive skin or metal allergies. Platinum's limited availability contributes to its desirability and value. It is estimated that the annual worldwide production of platinum is only a fraction of gold's production. This rarity makes platinum a symbol of prestige and exclusivity, elevating its appeal in the world of fine jewelry.

Platinum is a great Long-Term Investment with its ability to retain value over time. Its enduring appeal ensures that platinum pieces can be passed down as cherished heirlooms, maintaining their allure and value for generations to come.

In summary, platinum's purity, unmatched brilliance, exceptional durability, hypoallergenic nature, rarity, and long-term investment potential make it a highly sought-after material for body jewelry and a symbol of elegance and refinement.

What if your real Gold items get tarnished?

Tarnish is a thin layer of corrosion on metals resulting from a reaction to moisture, air, or chemical compounds on its surface. This will appear as a dark discoloration to your jewellery. We use an 18 karat Gold alloy containing other metals which can tarnish (pure 24k Gold will not tarnish but it is too soft to be used for Body Jewelry).

Usually it is easy to remove the tarnish from solid gold pieces by using a Jewelry polishing cloth, which is impregnated with an anti-tarnishing agent. Simply rub the cloth on the piece of jewellery and you'll see the tarnish begin to disappear. In cases of bad tarnishing, you can use a silver cleaner to wash the piece, or search the web for additional methods and hacks.

PRE STERILIZED SEA SALT BAND-AID NEW

Aphraheals Sea Salt Band-Aid is a quick and easy way to heal the inevitable swelling or redness of a new piercing within 1-3 uses.

It has also been proven effective in treating infections and keloids - a bump near the piercing formed from moisture buildup.

The solution is made of sea salt and flower of salt, a pure type of salt 15 times stronger than the regular. Its mineral-rich content - primarily Magnesium, Calcium, Potassium, and Iron - successfully cleans the area and fights against further infections.

Additional to healing piercings, Aphraheals can cure other blemishes and wounds.

CONTENTS

- 1.** With clean hands, submerge the pipette into a clean glass of (lukewarm) water and squeeze to fill up with water.
- 2.** Remove the bag from the seal pack and squeeze the pipette to transfer 3ml of water.
- 3.** Cover the affected area with the wet part of the bag. Place the band-aid on top and peel off the sides to make it stick to your skin.
- 4.** Leave it on overnight or for at least 6-8 hours. Gently squeeze wafer under the band-aid using the pipette when it's drying up.
